

Energy Awareness Matrix

Actions	 DISREGARD E	 START D	 STRENGTHEN C	 TAKE OFF B	 BECOME EXEMPLARY A
Measure and monitor my energy consumption	The energy used is not known nor monitored.	The energy used is measured by a person when there seems to be a billing error or the annual energy consumption is known by one person.	The energy used is measured every two months by a person but is not shared with the rest of the household.	The energy used is measured monthly and communicated to all household members.	The energy used is measured monthly and consumption targets have been set. Everyone is aware of actions that affect the energy consumption.
Know and understand the challenges of climate change	Climate change and its consequences are not known.	Climate change and its consequences are known by a person in the household.	Climate change and its consequences are known by all household members from general news or via the school.	Climate change and its consequences are known by all household members. Everyone is personally informed by books, documentaries and internet.	Climate change and its consequences are well known by all household members. It is natural to talk to visitors about climate change.
Saving energy in everyday life	Nobody pays attention to save energy.	A person in the household occasionally makes a few gestures to save energy. The others are aware of actions that should be taken but do not implement them.	Adults and children perform daily actions to save energy. Children are aware of some gestures but do not necessarily implement them.	All persons are aware and carry out actions to conserve energy.	All persons are aware and carry out actions to conserve energy. People outside the home are encouraged to perform energy savings when they visit our place.
Reflect on my purchasing actions	When we buy something, energy consumption is never considered.	When we buy something energy consumption is looked at but it is not a priority.	When we buy something, energy consumption is considered for purchases that we directly pay energy for (freezer, car, TV ...)	Energy criteria is taken into account for all purchases. The home tries to focus on local and energy-efficient products.	All purchasing activities reflect the need to minimize household energy bills and also the indirect energy consumption by looking at the source of the products and their composition.
Participate in my community life	Nobody in the household communicates with the outside world (family, friends) on energy issues and energy saving.	One person engages with the community on energy issues when a problem occurs with our consumption.	One or more persons in the household is interested in energy issues and regularly exchanges with the community on these issues.	All persons regularly discuss energy issues at work, school or leisure. A person is recognized as an energy ambassador by the community.	All persons are recognized as energy ambassadors and are involved in the community, at school or at work.
